### PAEDIATRIC UPDATES FOR GPs & PRIMARY CARE

# Common ENT Problems in Primary Care

Dr Cheentan Singh

Consultant Paediatrician
North Middlesex University Hospital

Poll: 1

#### Ranking of RFVs to primary care as reported by clinicians and patients

NO. OF

RANK	CONDITION	RANK SCORE <sup>‡</sup> (MAXIMUM SCORE WAS 20)	ANALYSES THAT INCLUDED THE CONDITION (OUT OF 9)	CONDITION	RANK SCORE <sup>‡</sup> (MAXIMUM SCORE WAS 20)	ANALYSES THAT INCLUDED THE CONDITION (OUT OF 5)
	Upper respiratory tract infection, unspecified	16.7	8	Cough	19.0	5
2	Hypertension	16.1	8	Back pain or spinal pain	16.8	5
3	Routine health maintenance	8.7	4	Abdominal, unspecified	16.6	5
4	Arthritis (not back)	8.6	6	Pharyngitis	14.4	5
5	Diabetes	8.4	5	Dermatitis	13.4	5
6	Depression or anxiety	7.7	6	Fever	12.6	5
7	Pneumonia	7.2	6	Headache	12.4	5
8	Acute otitis	6.8	6	Leg symptoms	9.4	5

Finley CR, Chan DS, Garrison S, et al. What are the most common conditions in primary care?
Systematic review. *Can Fam Physician*. 2018;64(11):832-840.

NO. OF

Bacterial

Viral

Allergic

Sinusitis, Pharyngotonsillitis,
Adenotonsilitis, Common
Adenoiditis, Chinitis, RLinosinusitis, Tonsillitis,

Does this a need Referral?

#### Bacterial:

- Acute /high temp +/- rigors
- Sick toxic look
- Halitosis
- Localised Inflammation +++
- Purulent/ Pus

#### Allergic:

- Recurrent / Constant
- Seasonal flareup
- Associated atopy / Hay fever
- Congestion +++
- Non Purulent

#### Viral: (Most common)

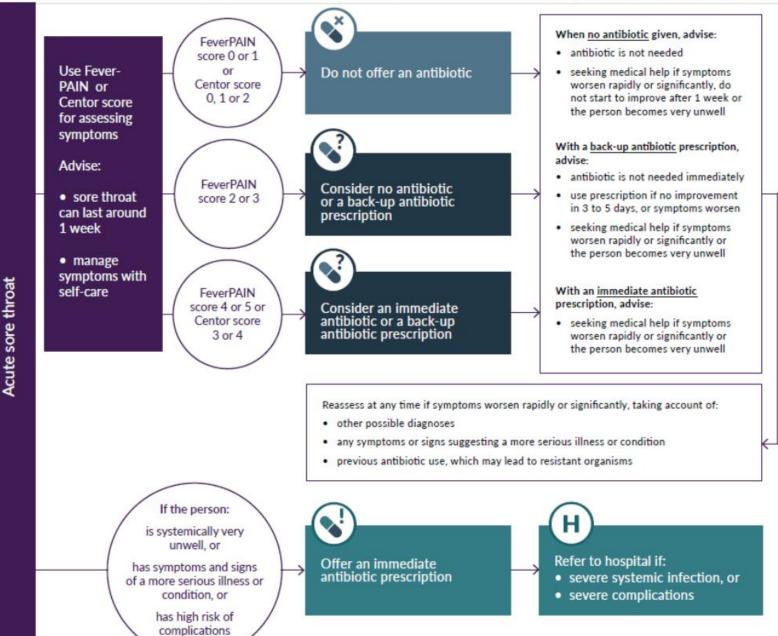

- Acute / off an on temperature
- Recurrent
- Serous discharge : Rhinorrhoea
- Multi organ inflammation
- Congestion and Inflammation

#### When to refer:

- Severe and Recurrent
- Abscess or collection
- Congenital defect or significant obstruction
- Obstructive sleep apnoea
- Unilateral Nasal (Foreign body) Throat (Fish bone)

Poll: 2

### Sore throat (acute): antimicrobial prescribing NICE National Institute for Health and Care Excellence

#### Self-care

- · Consider paracetamol for pain or fever, or if preferred and suitable, ibuprofen
- · Drink adequate fluids
- · Some evidence that medicated lozenges can help reduce pain in adults
- · No evidence was found for non-medicated lozenges. mouthwashes, or local anaesthetic mouth spray on its own

#### Evidence on antibiotics

- Antibiotics make little difference to how long symptoms last or the number of people whose symptoms improve
- · Withholding antibiotics is unlikely to lead to complications
- · Possible adverse effects include diarrhoea and nausea

#### FeverPAIN score

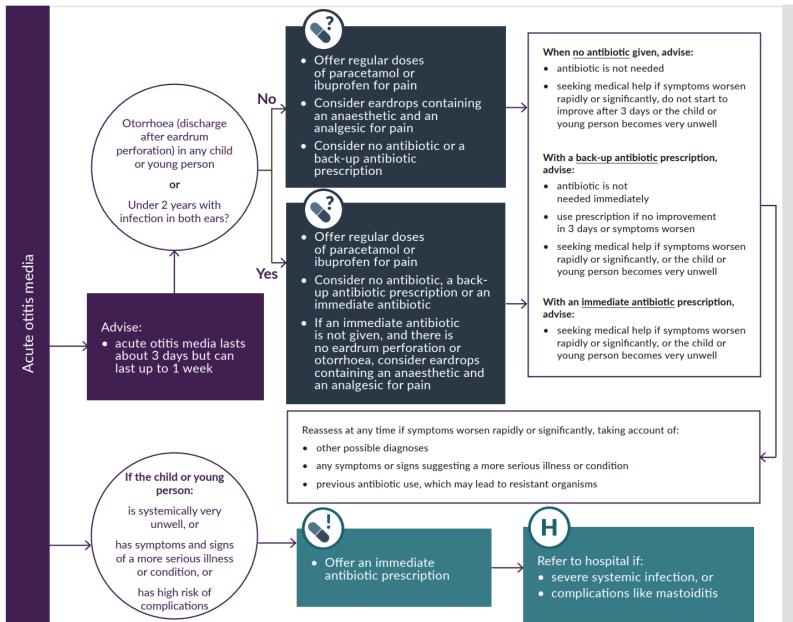

· Fever, Purulence, Attend within 3 days or less. Severely Inflamed tonsils, No cough or coryza 1 point for each

#### Centor score

 Tonsillar exudate, Tender anterior cervical lymphadenopathy or lymphadenitis, History of fever (>38°C), No cough 1 point for each

### Otitis media (acute): antimicrobial prescribing NICE National Institute for Health and Care Excellence

#### Non-antimicrobial treatments

- Offer regular doses of paracetamol or ibuprofen for pain. Use the right dose for the age or weight of the child at the right time, and use maximum doses for severe pain
- Consider eardrops containing an anaesthetic and an analgesic for pain if an immediate antibiotic is not given, and there is no eardrum perforation or otorrhoea
- Evidence suggests that decongestants or antihistamines do not help symptoms

#### **Evidence on antibiotics**

- Antibiotics make little difference to the number of children whose symptoms improve
- Antibiotics make little difference to the number of children with recurrent infections, short-term hearing loss or perforated eardrum
- Complications (such as mastoiditis) are rare with or without antibiotics
- Possible adverse effects include diarrhoea and nausea

### Groups who may be more likely to benefit from antibiotics

- Children and young people with acute otitis media and otorrhoea (discharge following eardrum perforation)
- Children under 2 years with acute otitis media in both ears

March 2022

Poll: 3

### Serous Otitis media: Glue ear

Possible impact :

Hearing & listening,

Language development,

Behaviour & emotional

Social wellbeing

### Non surgical Rx Auto inflation

What would not work:

Antibiotics / Antihistaminic/Leukotriene inhibitors/mucolytics/decongestants

### Surgical Rx Grommets

Indicated if hearing loss > 3months

**Bilateral** 

Affecting speech development/Behavioural changes

# Allergic Rhinitis (you already know from Dr Ashton's talk !!!)

- IgE mediated
  - Sneezing, discharge, congestion, itching

Seasonal / Perennial

Intermittent / Persistent

Impacts on school performance

Disturbed sleep

Poor concertation

Recurrent on infection mediated symptoms

May need allergy testing / Allergen avoidance

**Intranasal Steroids** 

Decongestants/Anticholinergic (age specific)

# Snoring and Obstructive sleep apnoea

Daytime sleepiness and lack of concentration Loud snoring Stopping to breath Sudden waking up gasping for air

Most commonly with 2-6 yr Adeno tonsillar hypertrophy Other causes of tone abnormality (Trisomy 21)

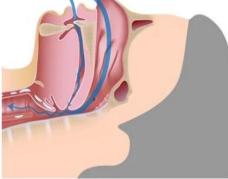

Investigations include sleep record and O2 saturation

Surgical 1<sup>st</sup> line Rx Adeno tonsillectomy
Rarely other treatments and airway support may be needed

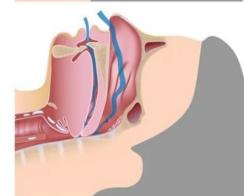

Normal breathing

Soft palate Uvula

Snoring - Partial obstruction of the airway

OSA - Complete obstruction of the airway

## Take Home messages

- ENT problems are very common in Primary care
- Mainstay symptomatic treatment is with PCM and NSAID
- Most don't need Antibiotics
- If needed Penicillin V/Amoxicillin/Erythromycin should work in most
- Consider allergic causes for recurrent / persistent symptoms
- Refer to ENT for symptoms of hearing loss and OSA
- Acute referral if suspicion of abscess / collection

### Many thanks for listening
